## IIT-Dharwad permanent campus project bags green award

DHARWAD, DHNS: The IIT-Dharwad permanent campus project here has been declared first runner-up in the 'Exemplary Performance Awards' by GRIHA under Passive Architecture Design Category.

In a press release, IIT-Dh Director P Sheshu said, the IIT-Dharwad is building a green and smart eco-friendly permanent campus. Energy consumption is being minimised by designing buildings to minimise air-conditioning requirements, and maximise daylight with use of solar passive architecture, effective insulation, effective use of glass, shading devices, etc.

He said, the lighting loads are further decreased by use of energy efficient light fixtures both inside and outside the buildings. The minimum efficiencies of utility equipment are chosen and designed to comply with ECBC-2017 standards.

He also noted that timers are planned for outdoor light-

ing to optimise lighting power. It is proposed to provide shuttle service onsite. Electric charging stations are planned for and & two-wheelers. The entire solar plant installation, and commissioning will be under the RESCO model.

Based on the above, he said, a compliance design basis document was submitted to GRIHA Council for consideration of the Exemplary Performance Award under the category of Passive Architecture Design in October 2021. M/S PEC Solutions Green Designs Pvt Ltd Founder-director Mala Singh is the associated consultant for GRIHA Certification of IIT-Dharwad Project- Phase-1A development.

The jury constituted by the GRIHA Council selected the entry of IIT-Dharwad under the category of 4-star Large Development Project for Passive Architectural Design as the first runners-up among the several nominations received.

# Dharwad IIT's campus project bags award

Dharwad: Dharwad IIT's permanent campus project has been declared as the first runner-up in 'Exemplary Performance Awards' by GRIHA under Passive Architecture Design Category.

IIT-Dh director P Sheshu said IIT Dharwad is building a green and smart eco-friendly permanent campus. Energy consumption is being minimised by designing buildings to reduce air-conditioning requirements and maximise daylight with use of solar passive architecture, effective insulation, effective use of glass, shading devices etc.

The lighting loads are further decreased by use of energy efficient light fixtures both inside and outside the buildings. The minimum efficiencies of utility equipment are chosen and designed to comply with ECBC-2017 standards, he said.

"Timers are planned for outdoor lighting to optimise lighting power. It is proposed to provide shuttle service onsite. Electric charging stations are planned for cars and two-wheelers. Total solar PV installation is set at a target of approximately 3.5 MWp from 100% building rooftops, surface parking covers and campus boundary. The entire solar plant installation, commissioning will be under the RE-SCO model," he said.

Based on these, a compliance design basis document was submitted to GRIHA Council for consideration of the Exemplary Performance Award under the category of passive architecture design in October 2021. Founder-director of M/s PEC Solutions Green Designs Mala Singh is the associated consultant for GRIHA Certification of IIT Dharwad Project-Phase-1A development. TNN
